Geological Society of South Africa

DATA MANAGEMENT AND SAMPLING QAQC

24 FEBRUARY 2027

Every resource estimate, exploration target and mining decision is only as good as the data behind it, and the GSSA's Data Management and Sampling QAQC course puts that data at the centre. It shows participants how to capture geological and assay data correctly at the source, validate it before it enters the database, and store it securely so that it stays consistent, traceable and auditable. Topics include structuring a geological database, managing drillhole, sampling and laboratory data from the field to the final dataset, and using backups, version control and audit trails to protect data integrity.

REGISTRATION FEES - MEMBER - R1500 | NON MEMBER - R1250 | STUDENTS/ACADEMIC/RETIRED - R500
