

Foundations for a Geological Career

What do I need to know after graduation

14 - 16 August 2019

Glenhove Conference Centre

About the Course

If you're a student, graduate or new entrant in the mining industry, this 3-day workshop is for you (even if you have been in the industry for some time, you can benefit from some of the information presented). The workshop will provide an insight into many of the topics never covered at university, but which will assist in making you a better professional geologist – including what geologists need to know about South African Mineral Law, Mining, Mineral Processing & Metallurgy, Survey, Engineering Geology & Hydrogeology, as well as ESG issues. There will also be presentations on interesting applications of Remote Sensing and Mineralogy.

In addition, day 1 includes a panel discussion featuring several geologists with extensive experience in various aspects of geology. Hear their experiences and ask them questions – you will be surprised how many of them started off with the same concerns that you have now.

Also covered are issues around good writing (of technical papers, reports, etc.), time management, writing an eye-catching CV and acing that important interview. The third day is dedicated to all facets of drilling and includes hands-on, practical features of this important aspect of a geologist life – the tried-and-tested, as well as the high-tech future.

Registration Fee

- Member - **R2750**
- Non Member - **R4000**
- Academic - **R2500**
- Retired/Student - **R1000**
