

Dear Geological Society of South Africa,

SABLE® is a leading **Geoscience Data Management** turn-key solution for the minerals industry and is holding its **2023 User Conference** in June this year (Johannesburg, South Africa), from the 21st to the 22nd of June 2023 to celebrate its **40th anniversary**.

We would like to extend an invitation of this hybrid conference (in person and online registration options) to your members.

SABLE® was developed in 1983 in South Africa to address the capture, management and analysis of geoscience data.

During the history of SABLE® the product has been engineered and continuously developed to cater for some of the world's largest and most challenging exploration and mining environments. These include gold of the Witwatersrand Basin, PGMs and related commodities in the Bushveld Igneous Complex, iron and manganese fields of the Northern Cape, Central African copper, Archaean/Proterozoic gold, heavy mineral sands, amongst others.

The conference will showcase presentations of SABLE® applications from a variety of exploration and mining projects and provide an in-depth review of both current and future functionality from SABLE®. This will provide an excellent opportunity for collaboration and networking with your industry peers.

We look forward to you joining us for this momentous occasion and learning why the SABLE® methodology has and continues to stand for **Sustainable Geoscientific Data!** (1983 to 2023) and why our customers implement SABLE®.

Details of the registration options will be provided in due course.

Yours sincerely,

The SABLE® Team

“Are you the lady that started SABLE?
Thank you for making us such a simple,
easy to use system. I have really
enjoyed using it!”

Karabo Mogapi 9th June 2022
