COURSE SUMMARY

Geological maps are a critical part of any exploration or mining project. These maps convey valuable and complex data in a usable and informative format so that important decisions can be made. Collecting, interpreting, and presenting geological data in well-structured and useful geological map is an essential skill for any geologist.

This 2-day Practical Mapping to Map Making Course takes participants through the basics of geological mapping and GIS. The participants will be guided through collecting and measuring real field data by Mr Jaco van den Berg who is a skilled exploration geologist with over 10 years' experience in the geological exploration industry. Participants will learn how to create geological maps from their own data, and they will be shown how to work with maps, sections, grids, and various vector and raster data formats.

COURSE BENEFITS

At the end of the course, participants should understand the basic principles, processes, techniques and requirements for successfully obtaining geological data, and know how to interpret and produce geological maps using free open-source software (QGIS).

The GSSA, in conjunction with their event partner(s), will sponsor a limited number of students. Click [here](#) for the application form. Applications open on 07 June 2022

REGISTRATION FEES

Members - **R4,800** | Non-Members - **R5,200** | Students/Retired/Academic - **R2,400**

WHO SHOULD ATTEND

This course is aimed at graduate geologists, students, and junior geologists seeking to improve their geological skills. It provides the attendees with the knowledge and skills to obtain data and produce high-quality geological maps.

COURSE PRESENTER

Mr Jaco van den Berg is a senior exploration geologist at Minrom Consulting and has spearheaded numerous exploration projects throughout Africa. Jaco's expertise in geology and mineral exploration covers a range of commodities including base, precious, rare, critical metals, and industrial minerals. Whether working individually or managing an exploration team, Jaco has produced thousands of geological maps in his career and is an expert in data collection, interpreting and producing geological maps. Jaco holds a BSc (Honours) in Geology from the University of Stellenbosch, a MSc in Exploration Geology from the Rhodes University, and a MBA Essentials from the University of Stellenbosch.
