Due Diligence

Principal Geoscientist

Purpose of the Job:

Responsible for providing technical expertise on mineral exploration and mining projects at various stages of development. Providing technical reports that comply with the requirements of the major stock exchanges and ability to undertake a solutions-oriented advisory role. Ad hoc project management in commodities of expertise and ability to sign-off as a competent person.

Competency Profile:

- Review mineral exploration and mining projects and compile independent technical reports
- Auditing, Competent/Qualified Person reports and sign-off for stock exchanges
- Input into due diligence, scoping, prefeasibility and feasibility studies as part of multi-disciplinary teams
- Compilation and interpretation of geological data and planning of further work programs
- Implementation and maintenance of SAMREC/JORC and other reporting code compliant procedures, quality control systems and checks to ensure total compliance of all MSA Work
- Technical, commercial and administrative management of exploration projects
- Networking within the mining industry in order to source new work opportunities where possible
- Deliver business development presentations and attend industry events and conferences where possible

Minimum Requirements:

- Relevant Post-Graduate Qualification in Geological Sciences
- 10+ years plus experience in exploring/evaluating either a specific commodity or range of commodities such that you are perceived to be an expert in your field
- Excellent technical knowledge and skills and up to date familiarity with technical and other trends within the industry
- Professional registration with SACNASP
- Excellent interpersonal skills and ability to establish strong relationships with staff, clients, and other industry players
- Strong existing industry network
- Excellent report and proposal writing skills
- Speaking, presentation and negotiating skills
- Good organisational and time management skills
- Good working knowledge of pertinent legislation and practice:
 - -Mineral laws
 - -Labour laws
 - -SAMREC and other reporting codes
- Proven business development and marketing skills
- Basic understanding of finance; accounting, cash flow, interest rates, economic cycles, costing, etc.
- Project management
- Prepared to travel (local & international)
- Desire and ability to mentor junior geologists
- Working experience with relevant software (e.g. GIS, 3D modelling)
- Working knowledge of another language (e.g. French, Portuguese) would be an advantage

If you are interested in applying for this role, please send your CV through to careers@msagroupservices.com before the 18th of November 2019.
